

IF-ELSE USING JAVA

An if-else statement has the following logical flow:

Task

Given an integer, **n**

perform the following conditional actions:

- If **n** is odd, print **Weird**
- If **n** is even and in the inclusive range of 2 to 5, print **Not Weird**
- If **n** is even and in the inclusive range of 6 to 20, print **Weird**
- If **n** is even and greater than 20, print **Not Weird**

Complete the stub code provided in your editor to print whether or not **n** is weird.

Input Format

A single line containing a positive integer, **n**.

Constraints

- $1 \leq n \leq 100$

Output Format

Print **Weird** if the number is weird; otherwise, print **Not Weird**.

Sample Input 0

3

Sample Output 0

Weird

Sample Input 1

24

Sample Output 1

Not Weird

Explanation

Sample Case 0: n=3

n is odd and odd numbers are weird, so we print Weird.

Sample Case 1: n=24

n>20 and n is even, so it isn't weird. Thus, we print Not Weird.

Solution:-

```
import java.util.*;

public class Solution {

    private static final Scanner sc= new Scanner(System.in);

    public static void main(String[] args) {

        int n = sc.nextInt();

        if(n%2!=0){

            System.out.println("Weird");

        }

        else if((n>=2)&&(n<=5)){

            System.out.println("Not Weird");

        }

    }

}
```

```
else if ((n>=6)&&(n<=20)){  
    System.out.println("Weird");  
}  
else {  
    System.out.println("Not Weird");  
}  
scanner.close();  
}  
}
```
